

VoIP Conferencing Solutions

www.encounter.net

Encounter Collaborative's VoIP solution is a conferencing platform that, in conjunction with our traditional telephony audio conferencing technology and our web-based Audio Control Panel, provides customers with a complete audio conferencing solution for any application.

Solutions

VoIP Guarantee: Encounter will guarantee back up audio connections should attendees listening to your conference over the Internet (VoIP) lose their internet connection

Audio Control Panel viewing: Participants listening to your conference via VoIP will appear on the Audio Control Panel, allowing presenters to monitor their conferences and attendees

VoIP Player: Encounter provides an easy to use VoIP player for both presenters and participants

Reliable: 24/7 technical support and customer care

Integrated Solution: Participants can access the Encounter VoIP player via the Microsoft Office Live Meeting console

Encounter Collaborative VoIP Solution

Encounter's IP Voice solution offers a one-way broadcast that combines a high quality audio component with low latency. For users participating from global and long distance locations, Encounter VoIP adds an easy-to-use and cost effective conferencing component that is both integrated with and backed-up by its other traditional audio conferencing technology.

By combining both VoIP and traditional audio conferencing on its web-based Audio Control Panel, Encounter provides a complete solution to meet our customers' needs. Our Audio Control Panel allows the customer visibility of all participants - whether they joined the call via VoIP or by traditional telephony.

In addition, Encounter's VoIP Audio Player can be embedded into the Custom Frame in the Microsoft Office Live Meeting console. This means that participants wishing to listen to a conference via VoIP can simply log into the Live Meeting Console and start hearing the audio!

Choose the solution that is right for you

Select the audio conferencing solution that best fits your needs and budget. We offer robust web conferencing services including Express Audio, Broadcast Audio, Priority Audio and Voice-Over Internet Protocol (VoIP) .

Encounter provides high quality audio conferencing, VoIP and web collaboration solutions to leading organizations and companies.
